

MOHAMED WASEEM

Computer Science Graduate | Full-Stack Development

+91 8072355318 • mohamedxxwaseem70@gmail.com • [GitHub](#) • [LinkedIn](#)

PROFESSIONAL SUMMARY

B.Tech Computer Science graduate (2026) with hands-on full-stack development experience, including a live production system built end to end (Next.js, Java, Python, Supabase). Also built a Python-based multi-modal automation system integrating image and speech processing. Basic working knowledge of Docker and Kubernetes from containerizing and running applications. Comfortable with Git-based version control and picking up new tools quickly. Fluent in English and Tamil, with strong written and verbal communication skills.

TECHNICAL SKILLS

Programming & Frameworks: Java, Spring Boot, Python, Flask, JavaScript, React, Next.js, REST APIs

Databases: MongoDB, Supabase, SQL

Data & Analysis: pandas, NumPy, foundational Machine Learning

Version Control: Git, GitHub

DevOps Basics: Docker, Kubernetes (containerizing and running applications)

Languages: English (Fluent), Tamil (Native)

PROJECTS

Farmer WhatsApp Bot — Multi-Modal Automation System

Built 2026

Python · Flask (web framework) · WhatsApp API · OpenCV (computer vision library) · Speech Recognition

- Built a WhatsApp chatbot that reads text, images, voice notes, and documents sent by farmers, using Python and the Flask web framework to handle each message type.
- Used OpenCV, a computer vision library, to analyse crop photos and detect signs of disease — turning an unstructured image into a usable diagnosis for a non-technical user.
- Added a speech-recognition module so non-literate farmers could ask questions by voice and get a spoken or text answer back.

MedForms Pro — Clinical Perfusion & ICU Forms Management

[Live — 2026 — abcd-nine-zeta.vercel.app](#)

Next.js (React framework) · Java · Spring Boot · JavaScript · Python · Supabase (database & authentication) · Google Sheets & Drive API

- Built a full-stack web app that digitizes ICU and perfusion forms, replacing paper records with structured, searchable data — Next.js and JavaScript for the interface, Java (Spring Boot) and Python for backend logic and services.
- Used Next.js for server-rendered pages and routing, and built backend services in Java with Spring Boot alongside Python, integrating both with Supabase for secure, per-doctor data storage.
- Synced exported data to Google Sheets/Drive for ongoing reporting.

EXPERIENCE

Python Programming Intern — SCION Research and Development

2024

- Automated internal engineering workflows in Python and supported the software development team on active research projects.

Data Science Training — DLK Software Solutions, Chennai

2025

- Completed structured training in Python and data analysis — using pandas and NumPy (Python libraries for handling and analysing structured data) and foundational machine learning concepts.

Data Entry & Cashier (Part-Time) — Johor Bahru, Malaysia

2026 – Present

- Handled daily data entry, billing, and inventory records using AutoCount, OneSale, and Qube POS/backend systems.
- Managed cashier duties including transaction processing, cash reconciliation, and customer-facing service.

EDUCATION

B.Tech in Computer Science & Engineering

2022 – 2026

Periyar Maniammai Institute of Science and Technology, Thanjavur, India — CGPA: 6.9

CERTIFICATIONS

- Data Science Certification — DLK Software Solutions (2025)
